

IN THE CLAIMS:

Please AMEND claims 18 and 19 in accordance with the following:

1. (PREVIOUSLY PRESENTED) An apparatus for forming a first state and a second state alternatively and sequentially on an optical recording medium in response to input data having a first level and a second level, respectively, in an optical recording apparatus, comprising:

    a recording waveform generating unit generating a recording waveform which includes a first multi-pulse having a plurality of first pulses corresponding to the first level of the input data and a second multi-pulse having a plurality of second pulses corresponding to the second level of the input data,

    wherein a leading one of the second pulses is set to a low level and a power level of a pulse between an end of the second multi-pulse and a first one of the first pulses of the first multi-pulse is set to a high level.

2. (ORIGINAL) The apparatus of claim 1, further comprising:

    a pickup unit generating light to form the first state and the second state on the optical recording medium in accordance with the first multi-pulse and the second multi-pulse of the recording waveform generated from the recording waveform generating unit.

3. (ORIGINAL) The apparatus of claim 2, wherein the pickup unit comprises:

    a laser device generating the light varying in accordance with the first pulses of the first multi-pulse and the second pulses of the second multi-pulse to form the first state and the second state on the optical recording medium.

4. (ORIGINAL) The apparatus of claim 3, wherein the laser device has a voltage to generate the light, and the voltage varies according to the first pulses during forming the first state and in accordance with the second pulses during forming the second state.

5. (ORIGINAL) The apparatus of claim 3, wherein the voltage is not a DC voltage.

6. (ORIGINAL) The apparatus of claim 1, wherein the input data comprises NRZI data having a high potential and a low potential each representing one of the first level and the

second level.

7. (ORIGINAL) The apparatus of claim 1, wherein the first state is a mark, and the second state is a space.

8. (ORIGINAL) The apparatus of claim 1, wherein the first multi-pulse is a recording pattern to form a mark, and the second multi-pulse is an erase pattern to form a space.

9. (PREVIOUSLY PRESENTED) The apparatus of claim 1, wherein the recording waveform generating unit generates a cooling pulse extended from a trailing one of the first pulses of the first multi-pulse to one of the second pulses of the second multi-pulse.

10. (ORIGINAL) The apparatus of claim 9, wherein the cooling pulse forms a portion of the first pulses and a portion of the second pulses.

11. (ORIGINAL) The apparatus of claim 1, wherein the first pulses of the first multi-pulse have a first high level and a first low level, and the second pulses of the second multi-pulse have a second high level and a second low level.

12. (ORIGINAL) The apparatus of claim 11, wherein the second high level of the second pulses is smaller than the first high level of the first pulses.

13. (ORIGINAL) The apparatus of claim 11, wherein the first pulses comprise a first starting pulse and a first ending pulse, and the second pulses comprise a second starting pulse and a second ending pulse, the first starting pulse varying in accordance with the second starting pulse and the second ending pulse of the second pulses.

14. (ORIGINAL) The apparatus of claim 11, wherein the first pulses have a first duty cycle, and the second pulses a second duty cycle.

15. (ORIGINAL) The apparatus of claim 14, wherein each second pulse comprises a high level and a low level, and the second duty cycle comprises:

a ratio of a duration time of the high level and another duration time of the low level in a range between 0.25T and 0.75T, where T is a cycle of a reference clock.

16. (ORIGINAL) The apparatus of claim 1, further comprising:  
a servo unit rotating the optical recording medium according to one of the first multi-pulse  
and the second multi-pulse during forming the first state and the second state.

17. (ORIGINAL) The apparatus of claim 16, wherein the second multi-pulse comprises a  
starting pulse and an ending pulse, and the servo unit controls a rotation speed of the optical  
recording medium in accordance with one of a starting pulse and an ending pulse of the second  
multi-pulse.

18. (CURRENTLY AMENDED) The apparatus of claim 1, wherein the recording  
waveform generating unit generates-detects information data representing a characteristic of the  
second multi-pulse.

19. (CURRENTLY AMENDED) The apparatus of claim 18, wherein the information data  
is recorded on the optical recording medium includes as a wobble signal, and the recording  
waveform generating unit detects the information data from the wobble signal.

20. (ORIGINAL) The apparatus of claim 18, further comprising:  
a servo unit rotating the optical recording medium in accordance with the information  
data.

21. (ORIGINAL) The apparatus of claim 18, further comprising:  
a laser device recording the information data on the optical recording medium.

22. (ORIGINAL) The apparatus of claim 21, wherein the optical recording medium  
comprises a lead-in-area, and the information data is recorded in the lead-in-area of the optical  
recording medium.

23. (PREVIOUSLY PRESENTED) The apparatus of claim 21, further comprising:  
a servo unit receiving the information data read from the optical recording medium and  
rotating the optical recording medium at a speed corresponding to the received information data.

24. (PREVIOUSLY PRESENTED) The apparatus of claim 21, further comprising:

a servo unit rotating the optical recording medium in a first speed, receiving the information data from the optical recording medium, and rotating the optical recording medium at a second speed according to the received information data.

25. (PREVIOUSLY PRESENTED) An apparatus for forming a first state and a second state alternatively and sequentially on an information storage medium in response to input data having a first level and a second level, respectively, in a recording apparatus, comprising:

a recording waveform generating unit generating a recording waveform which comprises a first multi-pulse having a plurality of first pulses corresponding to the first level of the input data, a second multi-pulse having a plurality of second pulses corresponding to the second level of the input data, and a cooling pulse concatenating the first and second multi-pulses,

wherein a leading one of the second pulses is set to a low level and a power of a pulse between an end of the second multi-pulse and a first one of the first pulses of the first multi-pulse is set to a high level.

26. (PREVIOUSLY PRESENTED) An apparatus for forming a first state and a second state alternatively and sequentially on an information storage medium in response to input data having a first level and a second level, respectively, in a recording apparatus, comprising:

a recording waveform generating unit generating a recording waveform which comprises a first multi-pulse having a plurality of first pulses corresponding to the first level of the input data, a second multi-pulse having a plurality of second pulses corresponding to the second level of the input data, and a cooling pulse concatenating the first and second multi-pulses, and

wherein a leading one of the second pulses is set to a high level and a power level of a pulse between an end of the second multi-pulse and a first one of the first pulses of the first multi-pulse is set to the high level.

27. (PREVIOUSLY PRESENTED) An apparatus for forming a first state and a second state alternatively and sequentially on an information storage medium in response to input data having a first level and a second level, respectively, in a recording apparatus, comprising:

a recording waveform generating unit generating a recording waveform which comprises a first multi-pulse having a plurality of first pulses corresponding to the first level of the input data, a second multi-pulse having a plurality of second pulses corresponding to the second level of the input data, and a cooling pulse concatenating the first and second multi-pulses, and

wherein a leading one of the second pulses is set to a low level and a power level of a

pulse between an end of the second multi-pulse and a first one of the first pulses of the first multi-pulse is set to the low level.

28. (PREVIOUSLY PRESENTED) An apparatus for forming a first state and a second state alternatively and sequentially on an optical recording medium in response to input data having a first level and a second level, respectively, in an optical recording apparatus, comprising:

a recording waveform generating unit generating a recording waveform which includes a first multi-pulse having a plurality of first pulses corresponding to the first level of the input data and a second multi-pulse having a plurality of second pulses corresponding to the second level of the input data, and

wherein a leading one of the second pulses is set to a high level and a power level of a pulse between an end of the second multi-pulse and a first one of the first pulses of the first multi-pulse is set to the high level.

29. (PREVIOUSLY PRESENTED) An apparatus for forming a first state and a second state alternatively and sequentially on an optical recording medium in response to input data having a first level and a second level, respectively, in an optical recording apparatus, comprising:

a recording waveform generating unit generating a recording waveform which includes a first multi-pulse having a plurality of first pulses corresponding to the first level of the input data and a second multi-pulse having a plurality of second pulses corresponding to the second level of the input data, and

wherein a leading one of the second pulses is set to a low level and a power level of a pulse between an end of the second multi-pulse and a first one of the first pulses of the first multi-pulse is set to the low level.
